

SceneVision™ - Panorama

Create, Annotate, and Present Multiple Panoramic Images of a Crime Scene.
Fast. Easy. Inexpensive.

With your current digital camera, or with an inexpensive point-and-shoot camera, create accurate, complete, high-resolution courtroom presentations showing your entire crime scene, quickly and easily. High-resolution, 360 degree panoramas no longer require expensive, special purpose cameras or lenses. Using a tripod, a simple 'panoramic tripod head', and almost any camera, you can take the photos for a 360 degree panorama in less than 5 minutes. SceneVision-Panorama can turn those panoramas into a compelling courtroom presentation.

First, take one or two rows of photos. Next, automatically 'stitch' those photos together to create 100 Mpixel panoramic images. Combine the panoramas in a SceneVision scene - placing them in a diagram of the scene. The scene is ready for display and analysis.

You can enhance the scene several ways. Place portals in the scene to move through doorways from one panorama to another. Hyperlink close-up photos, fingerprint images, text documents or video and audio files to any pixels in the panoramas. Draw lines in the scene and label them with measurements taken at the scene.

Fast, Easy, Powerful and Inexpensive, SceneVision-Panorama will turn your individual photos and panoramas into a comprehensive crime-scene presentation.

Features

- Display 2D and Spherical Panoramas interactively on standard PCs
- Link your Panoramas for Crime Scene 'Walk-throughs' with simple 'portal' markers
- Animate 'Walk-throughs' for automated courtroom presentations – just click and fly through the scene
- Link Close-up photos, videos, and documents to points in the scene with interactive 'hot spots'
- Display camera locations on an 'active' scene diagram; shows where you are located and your current view
- Draw Points and Lines in the photos and panoramas
- Use Photos from any Digital Camera; high-ends DSLRs or inexpensive point-and-shoots
- Import Panoramas of All Kinds from stitching software, panoramic cameras, or SceneVision™-3D
- Data Processing Log records your steps in creating the presentation
- Designed for Crime Scene Investigators and Crime Scene Presentations
